SUMMARY

SDET with 3+ years of experience leveraging AI-assisted development to accelerate test scaling and quality. As sole QA owner at a fast-moving startup, delivered zero-critical-bug releases during a public launch while cutting automation suite runtime by 40%.

SKILLS

AI-Assisted Dev: AI-Agents, LLM-Paired Programming, Playwright MCP, AI Agent Response Evaluation

Testing: Playwright, Selenium, POM, Playwright API Testing, Postman

CI/CD: GitHub Actions **Frontend:** React, Next.js **Languages:** TypeScript, Python, SQL

WORK EXPERIENCE

SDET, nRev.ai Nov 2025 - Present

- Served as the sole QA owner during a high-stakes public launch, ensuring zero critical bugs reached production despite multiple rapid, concurrent feature releases.
- Built an autonomous test-healing system beyond standard scheduled runs: it executes tests, evaluates failures for authenticity versus flakiness, and when locator or UI changes are the root cause, dispatches parallel AI agents to fix the issues and open pull requests with fixes ready for review, not just a failure report.
- Built an AI-assisted bug-reporting system auto-capturing network activity and RCA into tickets, cutting developer triage time.
- Implemented a Playwright MCP-driven workflow enabling same-day creation of new automation tests amid fast-moving feature releases.
- Optimized the existing automation suite, reducing total execution time by 40% through refactoring and parallelization.
- Designed and executed test strategies for evaluating AI agent responses, validating correctness and reliability of AI-driven workflow outputs.
- Architected a createNodeTest() factory that cut boilerplate across 50+ node types.
- Contributed 100+ commits to the Next.js/React frontend, debugging complex race conditions and state flow issues within Zustand stores and React Flow interactions, with RCA and fixes delivered to developers.

Software Engineer, CGI July 2023 - Oct 2025

- Provided quality assurance for HotScan360, a complex AML application for financial crime monitoring and big data fraud analysis, personally surfacing roughly 40% of all bugs the team found during release cycles.
- Streamlined JIRA test suite structure and organization, improving test tracking and workflow efficiency across the team.
- Built a tool that automated screenshot capture for manual testers, replacing a fully manual process, and highlighted the exact UI element clicked so testers could clearly trace what was interacted with.
- Developed automated test scripts and performed functional manual testing for new features.
- Awarded Silver and Bronze Awards for outstanding performance and critical bug identification.

AWARDS

- Silver Award** (CGI): streamlining JIRA project structures and improving workflow efficiency.
- Bronze Award** (CGI): handling complex, high-impact test cases exceeding productivity levels.

EDUCATION

B.Tech, ECE IIIT Trichy	2019 - 2023
Intermediate Sri Chaitanya	2017 - 2019
ICSE St Aloysius' Anglo Indian High School	2007 - 2017
